About Me

Arvin Abedi

AI Content Strategist

Welcome to my Portfolio!

I'm an AI Content Specialist working across LLM workflows, custom GPTs, SEO/content systems, and AI-generated product visuals.

My work includes custom agents for content strategy and article briefs, AI-assisted writing and translation workflows, and product-focused visual production for industrial, lifestyle, and campaign use cases.

My strength is turning brand needs, product information, and content goals into usable AI-assisted workflows and polished outputs.

AI-Generated Product & Advertising Visuals

Product-focused visuals created for lifestyle, campaign, and digital advertising use cases.

Industrial & Technical Product Visuals

AI-generated visuals for construction, workshop, and technical product-use scenarios.

SEO Opportunity & Content Strategy Agent

PROBLEM

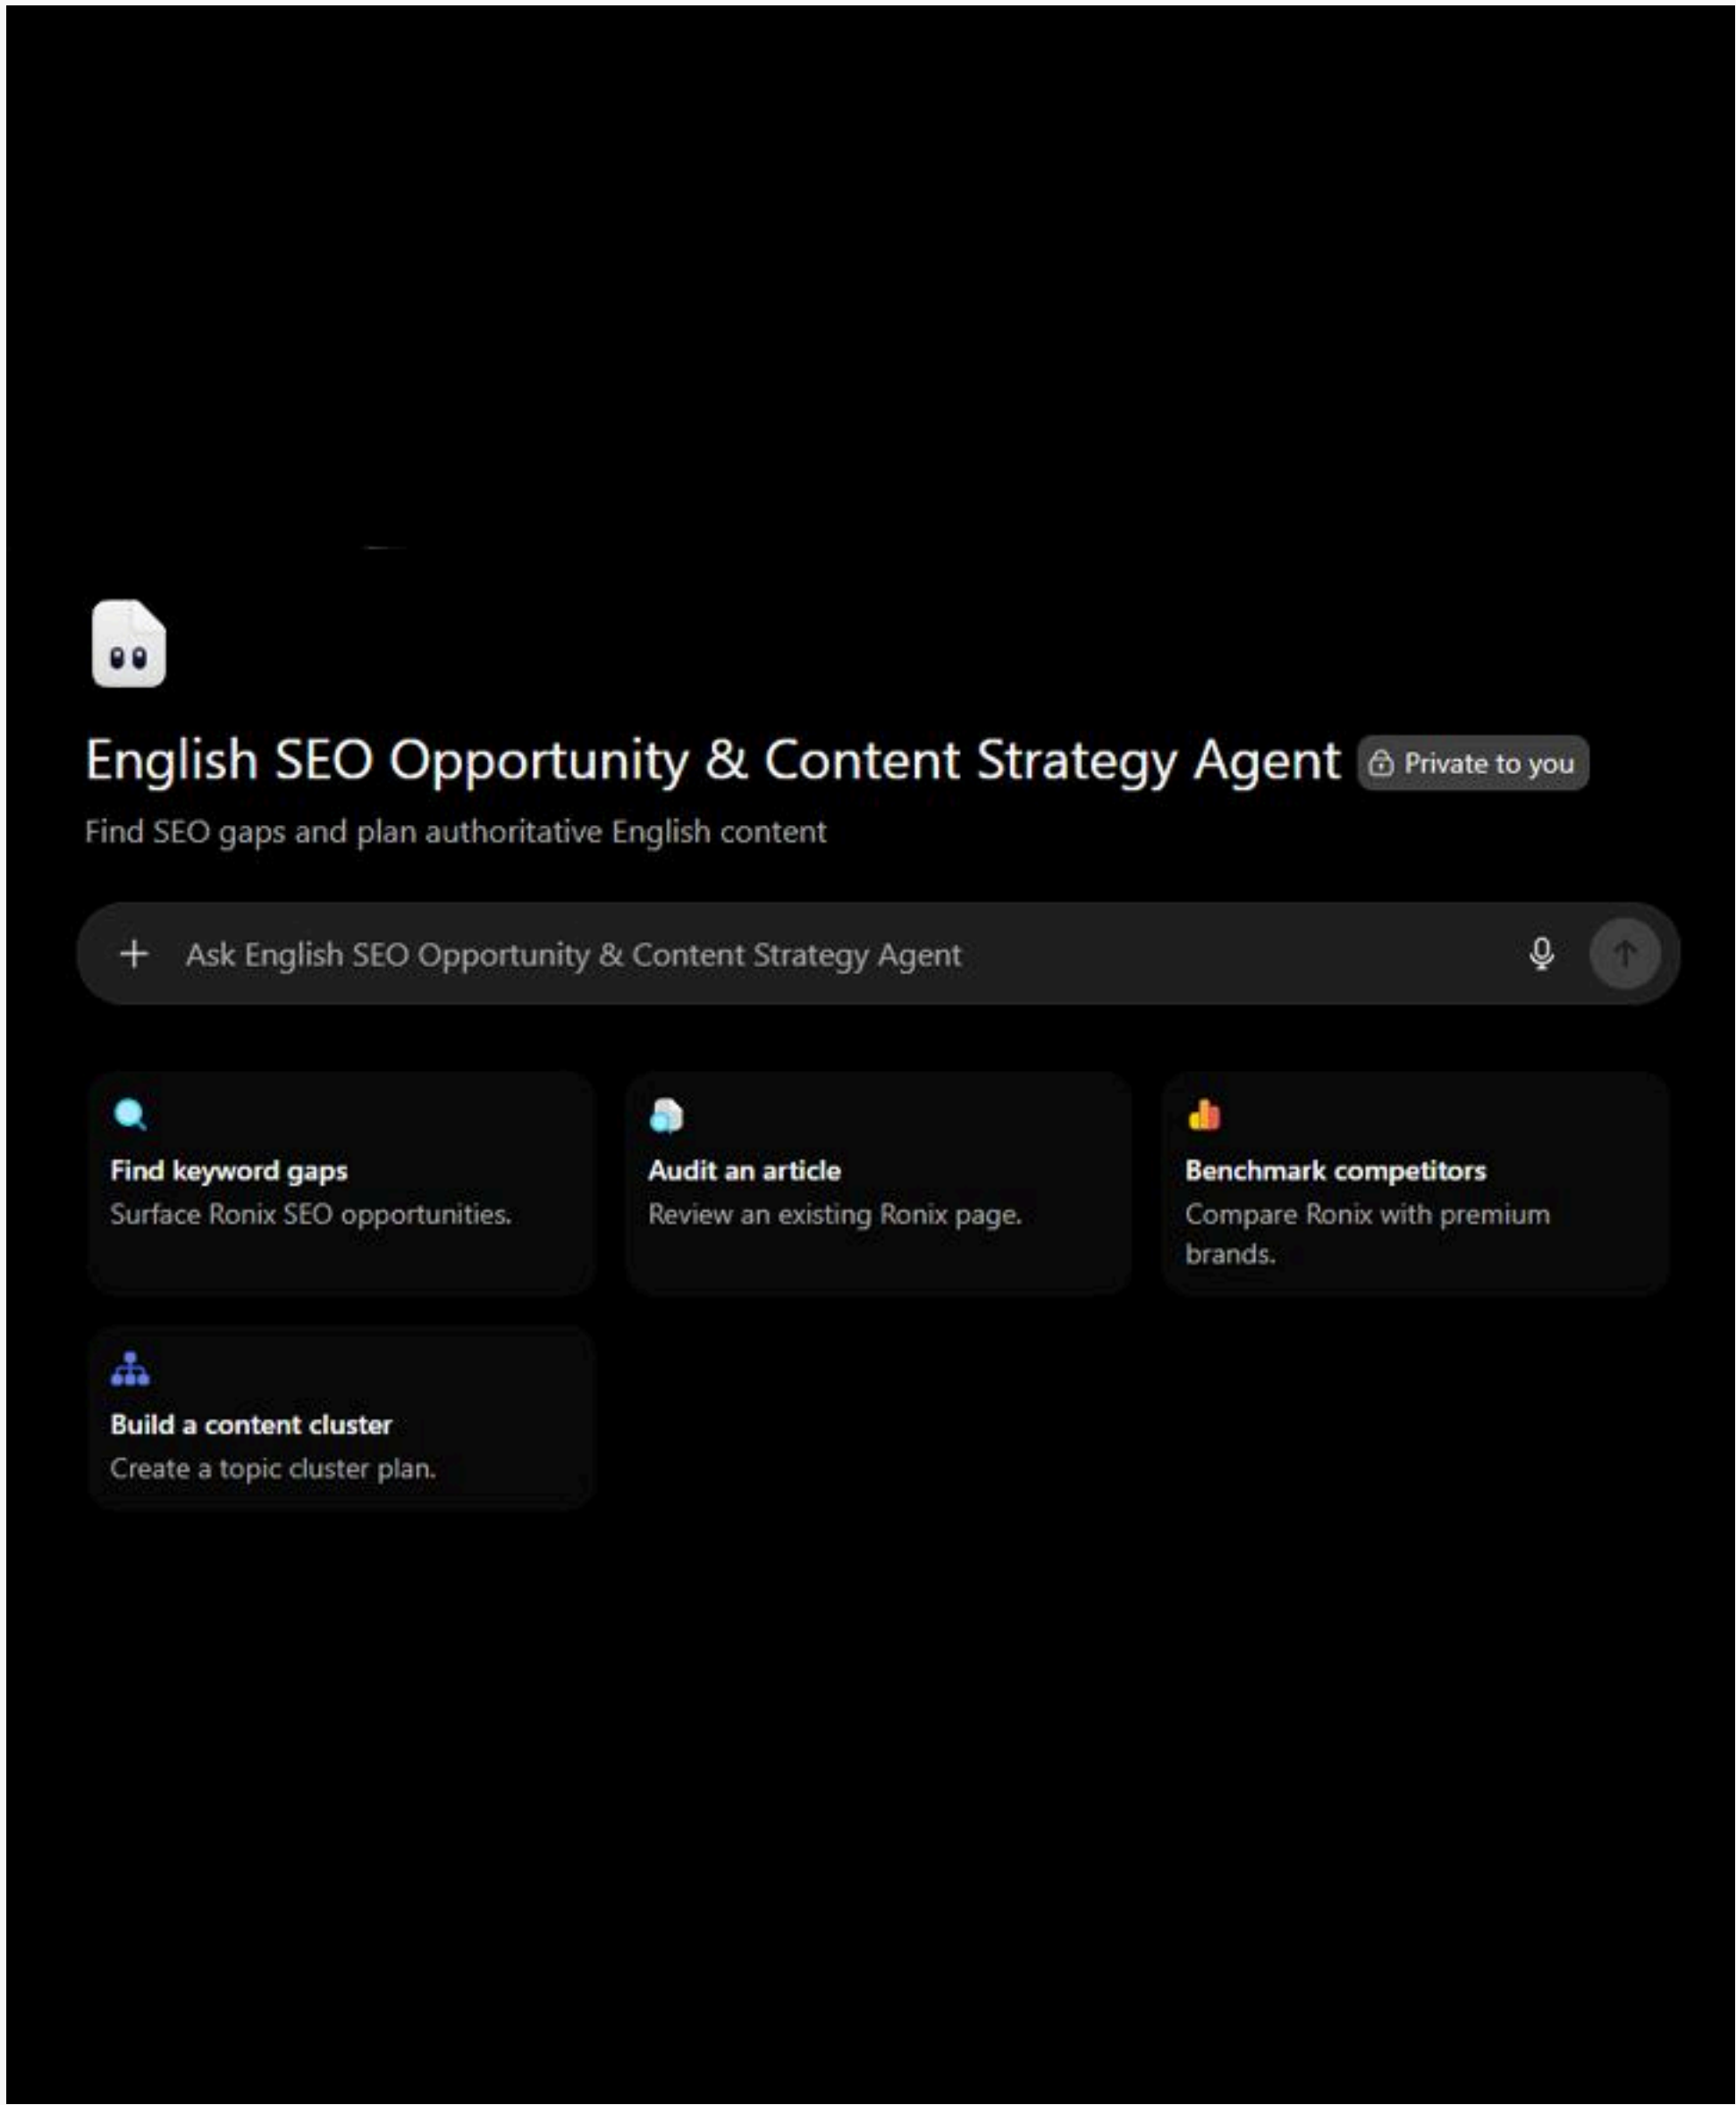

Ronix needed a faster way to identify English SEO opportunities, understand search intent, benchmark competitor content, and plan stronger article strategies for industrial tool topics.

METHODS

- Custom GPT design
- SEO workflow planning
- Search-intent classification
- Competitor benchmarking
- Content-gap analysis
- Google Drive knowledge integration

SOLUTION

I built a custom GPT that helps surface keyword opportunities, diagnose content gaps, compare Ronix content against competing brands, and produce structured SEO/content strategy outputs for English articles.

English Article Brief Builder

Creates complete English writer briefs for Ronix articles, including article goal, audience persona, search intent, keyword cluster, heading structure, FAQs, product mentions, internal links, CTA, expert angle, and quality checklist.

English Article Brief Builder

PROBLEM

Writers often need more than a topic or keyword to produce strong content. They need a clear article goal, audience definition, search intent, structure, product relevance, internal links, FAQs, and quality standards.

METHODS

- Custom GPT configuration
- Prompt-system design
- SEO article structure
- Writer brief templates
- Product-content planning
- Content QA checklist

SOLUTION

I built a custom GPT that creates complete English writer briefs for Ronix articles, helping writers produce clearer, more structured, SEO-aware, and technically credible content aligned with brand and product goals.
